

LED driver, LED module and Controls

Spot and Downlights

Miniaturisation that puts light centre stage

TRIDONIC

Minimalist track lights – focus on the essentials

More space for architecture, lighting effects and design

To enable architecture and lighting to be combined in one unit, which is both functionally and aesthetically impressive, Tridonic is consistently continuing the trend towards miniaturisation. Various driver solutions – from simple to sophisticated – reflect the complete evolution of track lighting and open up entirely new possibilities.

For a long time, spotlight design was governed by the dimensions and temperature behaviour of the LED drivers. Large trackboxes severely restricted design freedom. Tridonic's new driver solutions eliminate this problem.

Its range of drivers has been extended with the 7th generation of SLE modules, which offer even greater efficacy, improved lifetime and intelligent temperature management. This module series makes a significant contribution towards miniaturisation and, at the same time, achieves outstanding colour rendering that is second to none. Tridonic not only offers engines with perfectly coordinated modules and drivers, but also sets new benchmarks in the field of production. Software and online tools provide support during parameterisation and make individual programming of the drivers easier. These are also the first tools to demonstrate the possible functions – including wirelessly via NFC.

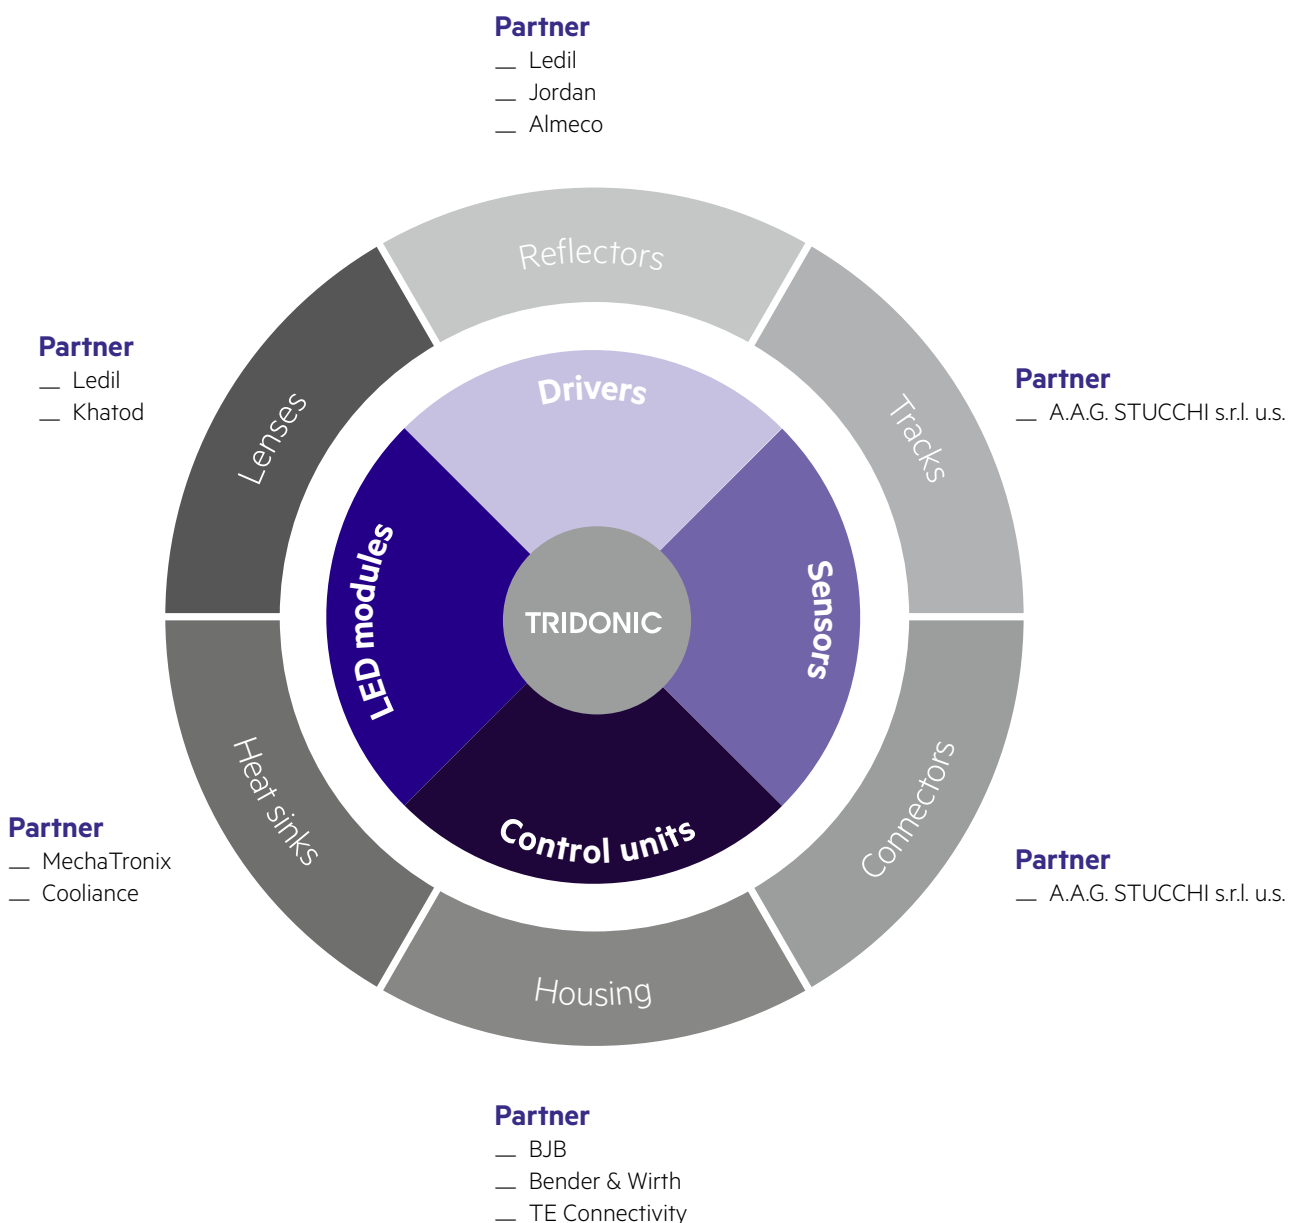

Spot and downlights

Overall supplier of LED solutions

Individually perfect and jointly complete

Tridonic drivers and modules are perfectly coordinated with each other and are supplemented with matching control units to create intelligent lighting solutions. To also make the luminaire design

as simple as possible, Tridonic maintains close partnerships for a wide range of accessories and optimised components.

Tridonic Setbuilder

With Tridonic's web tool, you can find the ideal combination of LED module and driver quickly and easily. The user-friendly user interface with detailed filter system guides you through the different levels in just a few steps and allows you to calculate performance figures for the modules.

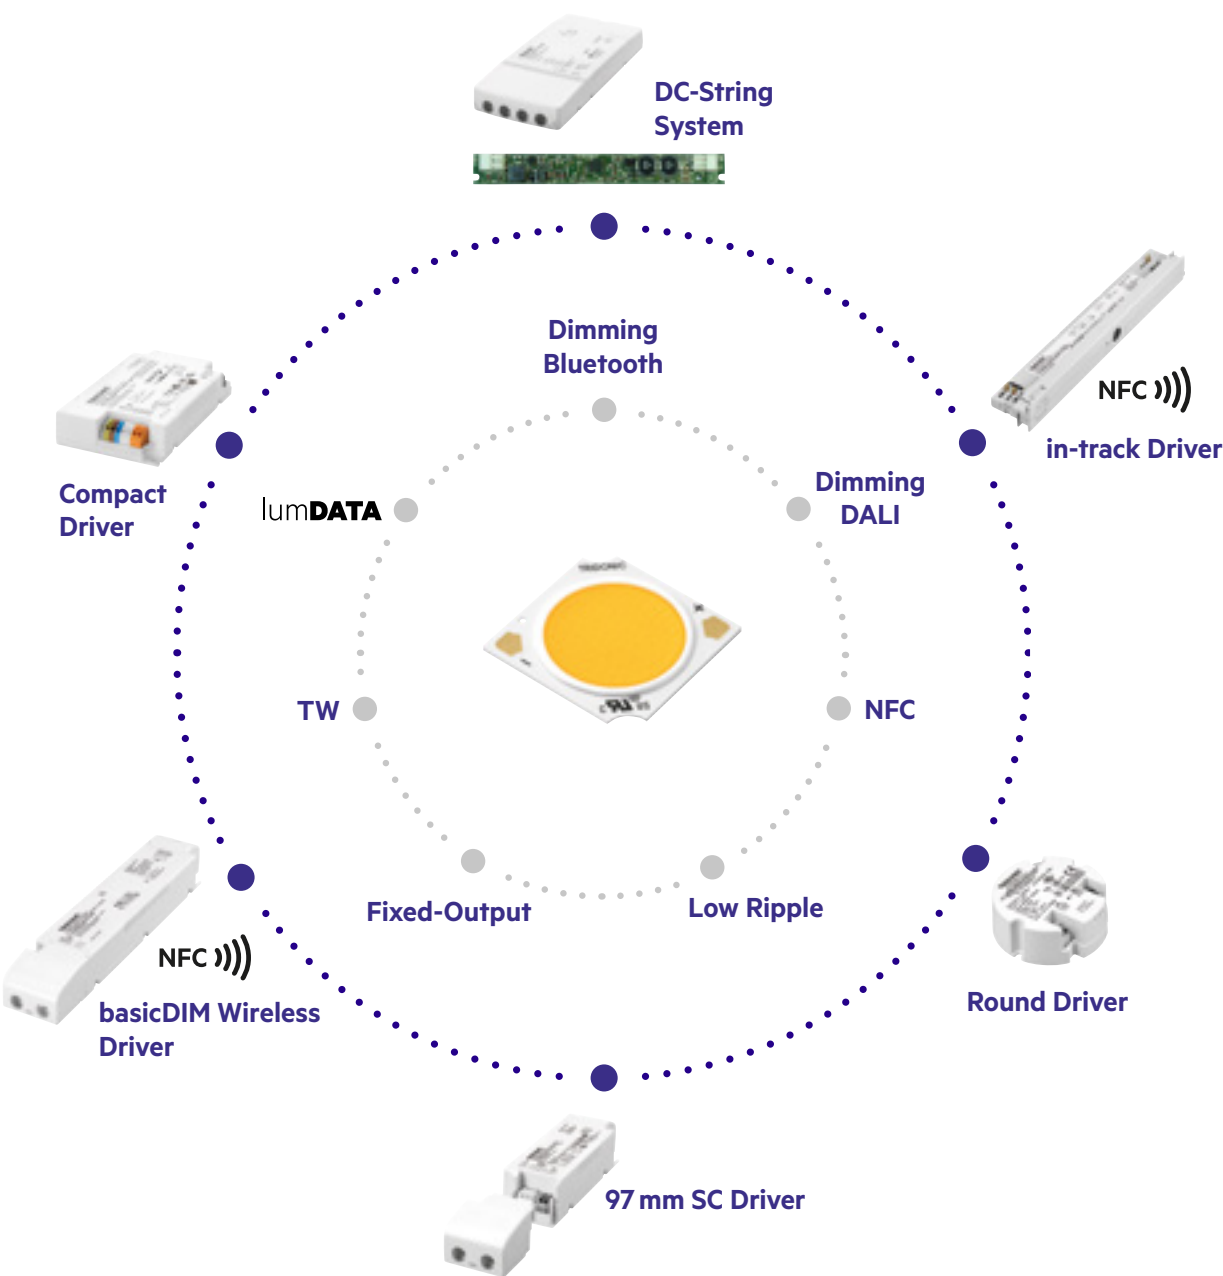

A network of possibilities

Combining size and function according to requirements

The wide range of driver solutions means it is possible to specifically influence the size of the spotlight. Thanks to small drivers with a length of just 97 millimetres, it is already possible to significantly reduce the size of trackboxes. However with in-track drivers and round drivers, it is possible to dispense with trackboxes entirely, allowing for

a minimalist spotlight design. With its revolutionary DC-String solution, Tridonic goes one step further. Again, there is no need for trackboxes. Furthermore, it is possible to minimise the standard size of the 3-phase track.

Overview of the areas of expertise in LED modules

1 Long-standing expertise

- Experience of having delivered over 100 million LED modules
- Ongoing optimisation from one generation of modules to another makes for technology that is always state of the art

2 High-quality raw materials

- Exclusively made from raw materials of the Tridonic standards
- Only suppliers who are technological leaders in their field
- Intensive market analysis through benchmarking processes

3 Strict qualification programme

- Extensive tests of all relevant materials
- Zero-tolerance demand for the highest standards
- Advanced tests on relevant material combinations

4 State-of-the-art production methods

- Very high level of automation
- Clean room production in accordance with the strictest European standards

5 Universal product diversity

- Four value tiers to cover all of our clients' needs
- Zhaga-compliant product designs

6 Final tests well above average

- 100 percent test quota
- Exceptionally stringent testing according to criteria for processing capacity, optical characteristics and reliability

7 Complete solutions from a single source

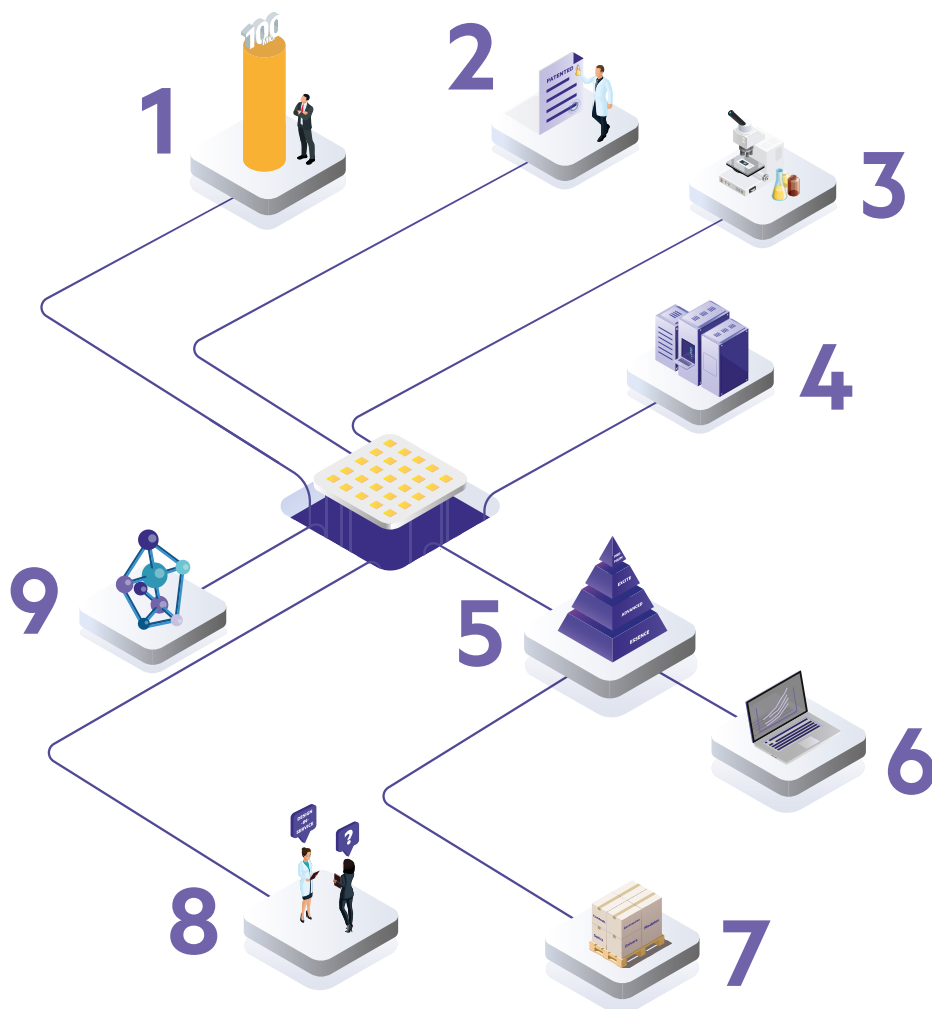

- Perfectly compatible modules, drivers, sensors and control units
- Best performance of any light engine

8 Customer support

- Design-in-service
- Tridonic data sheet containing extensive information
- Support with certification

9 Commitment to science and industrial associations

- Helped to shape new norms and international standards
- Development of innovative technologies in close collaboration with leading research institutes

Lighting technology for magnificent lighting experiences

The new LED generation for spot and downlights

Product portfolio – Overview

¹⁾ TIM=Thermal Interface Material

Lighting technology for magnificent lighting experiences

The new LED generation for spot and downlights

The SLE module series for spotlight applications allows for multifaceted and impressive design in shops, exhibitions and hotels. While ADV modules impress with high efficacy and perfect colour rendering, EXC modules, with their additional selection of special colours, are ideal for special presentation lighting tasks.

The module series, which is now in its seventh generation, offers outstanding efficacy of up to 190 lumen per watt and optimised colour rendering, providing the right solution for any requirements. With a new TIM material, which improves the thermal connection to the heat sink and thus also improves heat dissipation, SLE G7 enables a particularly small luminaire design.

New phosphor settlement process: The phosphor particles for light conversion are no longer distributed in the silicone matrix, but concentrated on the bottom of the light emitting area – providing more light output with better cooling of phosphors and colour uniformity.

LES Sizes					
SLE G7 (mm)	LES 21	LES 17	LES 15	LES 13	LES 9
SLE G1–G6 (mm)	LES 23	LES 19	LES 17	LES 15	LES 10
PCB size	31x31	31x31	19x19	19x19	13.5x13.5

The optimised procedure used to apply the phosphorous layer guarantees a substantial improvement in the Derating curve and thus ensures a stable quality of light over the entire lifetime. Thanks to the concave module corners, installation is also quick and easy.

The dimensions have also been adapted to the standard designations.

essence Serie (SNC8)

Compact solution for simple applications

The compact modules for spotlights and downlights are ideal when elementary lighting tasks need to be fulfilled. With three versions from LES06 to LES15, different luminaire sizes can be covered with the module.

The eighth SLE generation convinces with excellent colour rendition as well as narrow colour tolerance. Technical features such as Dam&Fill technology and COB technology ensure homogeneous radiation and excellent thermal management over the entire service life.

At a glance:

Module SLE SNC8

- Module sizes: LES06, LES09 and LES15
- Colour temperatures: 3,000 K, 3,500 K, 4,000 K
- High colour rendering $R_a > 80$ and $R_a > 90$
- Narrow colour tolerance MacAdam 3
- Homogeneous radiation due to Dam&Fill technology
- Excellent thermal management thanks to COB technology
- Mounting holes for M3 screws
- Lifetime up to 60,000 hours

Module SLE 9 mm R SNC8 3000K

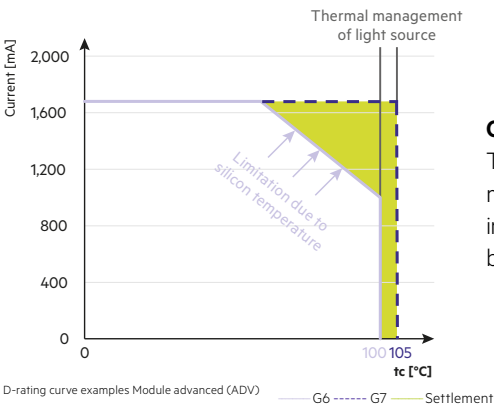

Main benefits of the 7th generation

Efficiency, lifetime, thermal improvement

up to
16 %

Higher efficacy

All raw materials at Tridonic are qualified according to the highest quality standards. In combination with strict test procedures, consistent benchmarking and high levels of expertise, Tridonic is constantly driving lighting technology forward. As a result, it has been possible, for example, to increase the efficacy of the SLE modules by up to 16 percent, so that it is now up to 190 lumen per watt.

Optimised Thermal Improvement

The improved procedure for applying the phosphorous layer enables optimised thermal management, which not only allows for a higher operating temperature, but also an improvement in the derating curve. Thus, over the entire temperature range, the modules can be operated with currents of up to 1,600 mA and the heat sinks can be significantly reduced.

55,000
hrs

Longer lifetime

The new SLE generation scores highly with a significantly longer lifetime, which amounts to 55,000 hours with the L80 values. At more than 50,000 hours, the L90 values also offer an outstanding lifetime and once again confirm the unique quality of Tridonic.

advanced series (ADV)

Brilliant white light with high efficiency and wide range of options

- At a glance:
- Module SLE G7 ADV**
- Luminous flux range: 6,000 lm / 5,000 lm / 4,000 lm / 3,000 lm
 - Uniform radiation with Dam&Fill technology
 - TIM variants for easy and fast assembly
 - Excellent colour rendering (CRI > 80 and > 90)
 - High colour consistency (MacAdam 3)
 - Housing with Snap-on feature for easy reflector mounting
 - High modules efficacy up to 190 lm/W (@ tp 25 °C)
 - Long lifetime L80 55,000 hours
 - 5-year guarantee
 - For operating with SELV driver suitable

Overview of available luminous flux

Module SLE G7 EXC

- Application: Shop, Retail and Art
- Tailored spectrum composition for FOOD Lighting: GOLD makes bread appear crispier, MEAT and sausages appear fresh and juicy, FISH underlines the freshness of fish and seafood, FRUIT accentuate the freshness of fruit and vegetables
- Highest light quality in the market with full spectrum technology for ART, so the objects appear exactly as they were intended
- FASHION offers unique lighting experience for textiles: special LED spectra so that items are naturally improved and colours are more vivid with the high CRI
- With a perfect balance between colours PURE WHITE modules allow objects to shine brighter with the highest efficacy
- High colour consistency MacAdam 3 (ART: MacAdam 2)
- High module efficacy up to 160 lm / W (@ tp 25 °C)
- Long lifetime L80 55,000 hours
- 5-year guarantee
- For operating with SELV driver suitable

Illumination with a sales-promoting effect is a big challenge for lighting technology. Different materials and colours require specific lighting characteristics in order to be shown off to their best effect. Tridonic offers a wide range of modules for this purpose, which can be used to stage the most diverse objects perfectly.

In the food sector, the targeted use of special light colours has long been standard practice. Intensive brown tones make bakery products appear crispier, while meat appears juicier against full red tones and cool light makes fish look even fresher. Tridonic also offers modules that ensure natural colour rendering across all locations. Shops can also benefit from special modules for fashion as well as the new PURE WHITE light colour, which highlights white tones for a natural, full colour effect. All components are selected and developed in a strict qualification process. Patented phosphorous recipes optimise the interaction between efficiency and colour rendering.

excite serie (EXC)
FOOD

FOOD

Food retailers want to make their fresh products such as fruit, vegetables, bread and meat, look as attractive as possible. And luminaire manufacturers are helping them do so by creating lighting systems that emphasize the reds in fresh meat and tomatoes for example, or the warm brown-yellows in fresh bread. The correct light can have a hugely positive impact on shoppers' perception, creating an almost mouthwatering effect.

At a glance

- Application specific colours for attractive product presentation
- For spotlights and downlights
- Housing with snap-on feature for easy reflector mounting
- 50 mm housing with 35 mm mounting hole distance acc. to Zhaga

premium serie generation 2

The SLE module in the premium category lays the foundation for lively spotlight and downlight solutions that cover the entire color range from 2,700 to 6,500 Kelvin and can be customized as needed.

The combination with the DT8 driver from Tridonic results in a perfectly matched system for tunable white lighting. The premium module is available with a choice of two LES sizes, which are equipped with different lumen packages. Instead of conventional phosphor COBs, the second generation features CSP LEDs, which enable even more homogeneous radiation. For maximum uniformity, the modules can also be expanded with an optional mixed lens.

At a glance:

Module SLE PRE2

- Two sizes: LES 13 with 2,000 lm, LES 17 with 3,000 lm
- Efficiency up to 110 lm/W (LES 13) and 110 lm/W (LES 17)
- Color rendering: Ra > 90
- Color consistency: MacAdam 3
- Built-in module with Chip Scale Package LEDs (CSP)
- Compatible with 38 W DT8 drivers from Tridonic
- Optional mixed lens for even higher uniformity
- Lifetime up to 60,000 hours

SLE 13 mm PRE2

SLE TW D50 4T

More uniform light thanks to Chip Scale Package (CSP)

The current generation of SLE modules has a new type of LED technology in the form of Chip Scale Package, where the LED chip and housing are almost the same size. This allows the individual LEDs to be configured in a staggered formation like a chess board. Combined with the small LED spacing, this enables particularly

homogeneous light to be generated. The light output is increased thanks to the lateral emitting surfaces. As the LEDs in COB technology are placed on strips, rings can form in the reflector. This effect is avoided with CSP.

The market-tested and extremely reliable Module DLE portfolio is being further expanded. The compact system solutions for your downlights are being updated in terms of efficiency and application.

In its fourth generation the compact system solution for downlights has had its efficiency improved by up to 12 percent and at 185 lm/W is one of the most efficient downlight modules. In addition to the proven benefits such as excellent colour rendering of CRI > 80 and the small housing, the new generation offers greater flexibility with additional selection options. The modules are available as LED board or housing versions with integrated diffuser technology and can be operated with a dimmable or non-dimmable driver.

Bundling brings movement into your spotlight design

Fewer components, more variety

Spotlights can now be manufactured even more efficiently:
Three drivers are sufficient to cover the entire lumen bandwidth of an LED module. The result is maximum flexibility with regard to product design, which goes hand in hand with low storage costs.

Financial advantages

- Only one SLE LES15 LED module for all common lumen packages for a luminaire
- Easy output current selection by plug, making it possible to use different amounts of luminous flux with one driver
- 100 percent Tridonic solution for optimum service and guarantee

Technical advantages

- Stretched Compact housing just 97 mm in length for the further miniaturisation of spotlights and downlights, with optional strain relief
- *Low ripple current (+/-5 %) for flicker-free luminaires
- Forward voltage that is perfectly attuned for efficient operation of the SLE modules
- Safe electrical connection due to strain relief (optional)

Bundling brings movement into your spotlight design

At a glance:
Driver advanced (ADV) fixC SR ADV 2

- Independent driver with strain-relief housing
- Housing with strain relief and the option of loop-through wiring
- Extra flat housing for constrained installation conditions (small ceiling cut outs and low ceiling voids)
- Output current 350 – 1,050 mA
- Surge and Burst protection
- Type of protection IP20
- Temperature protection as per EN 61347-2-13 C5e
- For luminaires of protection class II
- Nominal life-time up to 50,000 h
- 5-year guarantee

Constant current driver Round (R), built-in ADV2

New generation, two selectable output currents

The round advanced driver (ADV) has been fundamentally optimised. As a result, the second generation can be used both for luminaires in protection class I and for luminaires in protection class II. A new 36 watt version with optional 850 or 900 mA extends the possible applications of the driver series – as does the additional extra-slim design, which can be perfectly integrated in small spotlights. Each driver has two output currents, which can be selected via a plug-in jumper. This not only reduces the amount of article numbers, but also the logistical effort. New plug-in terminals also simplify the wiring.

- At a glance:
- New Generation: Driver Round ADV2**
- Fixed-output built-in LED driver
 - Typical applications: spot light, track light and wall light
 - Adjustable output current 250 – 900 mA
 - Up to 90 % efficiency
 - For ambient temperatures up to 60 °C
 - For luminaires of protection class I and II
 - Nominal life-time up to 50,000 h (at ta 50 °C)
 - 5-year guarantee

Further details can be found in the datasheet

in-track driver EXC / ADV for 3 phase track system

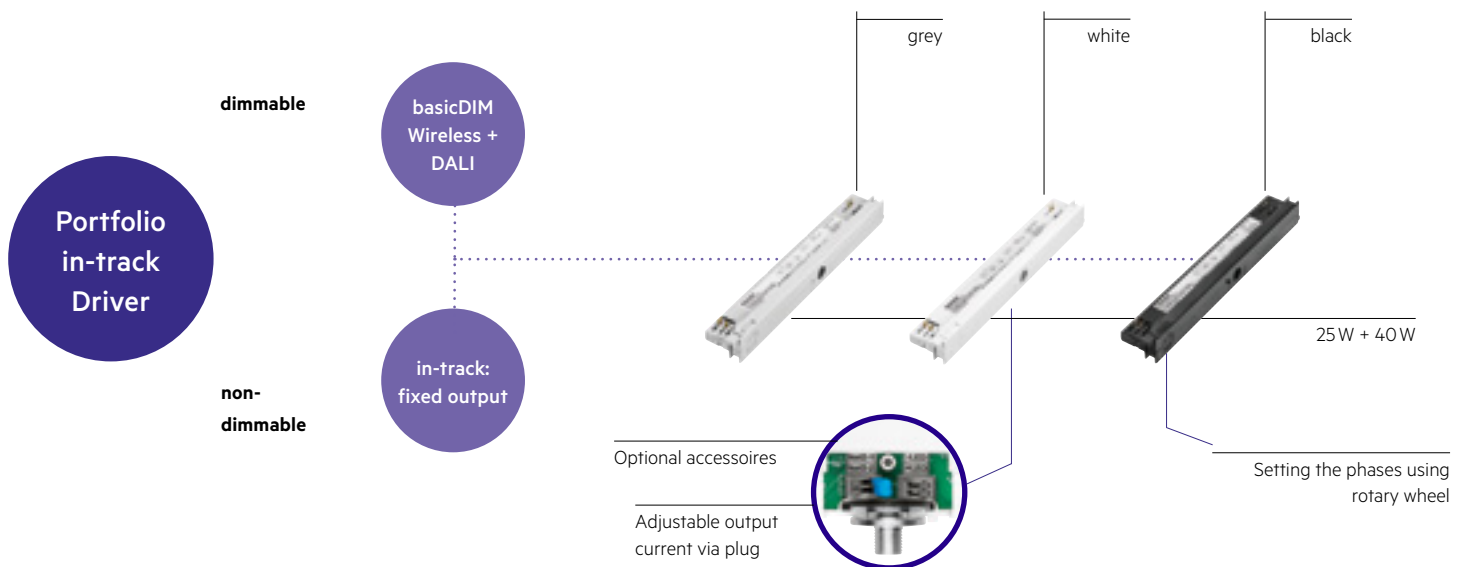

Invisible to the eye, but essential for perfect track lights

Tridonic makes a further contribution to the trend towards miniaturisation with its in-track drivers with up to 40 watts. Drivers and adapters – available in black, grey or white – can be integrated into a 230 V 3-phase track, taking up little space, which means that a separate trackbox is no longer required. The drivers are available in fixed-output and DALI-dimming versions or with the integrated Casambi-ready basicDIM Wireless module, as required. Thanks to the wide operating window of 350 to 600 mA or 500 to 1,050 mA, the in-track driver can be combined with any LED spotlight module. Depending on the model, the output currents can be easily adjusted via I-SELECT 2 plug, companionSUITE or basicDIM Wireless – in the excite series (EXC), even in increments of 1 mA. The NFC interface enables the simultaneous programming of entire packing units with up to 10 drivers in a single process.

At a glance:

3PH driver in-track

- Constant current/track LED driver
- Output current adjustable between 350–1,050 mA,
- with I-SELECT 2 plug or DALI technology
- EXC version: In-field programming with NFC interface possible
- Low flicker < 5 %
- Available in black, white and grey
- Nominal life time up to 100,000 h
- 5-year guarantee

*like EXC3: complies with EXC3-Layer; See also page 30+31

Interfaces

Near field communication (NFC)

one4all (DALI-2, switchDIM, corridorFUNCTION)

At a glance:

Driver basicDIM Wireless in-track

- Casambi-ready dimmable driver for direct installation in 3-phase tracks
- For scaled-back spotlight and track lighting without trackboxes
- NFC interface for multiprogramming and easy parametrisation
- On-site adjustment via 4service NFC app
- Output current adjustable via companionSUITE
- or basicDIM Wireless
- Dimming range: 1–100%
- Life time 100,000 h
- 5-year guarantee

in-track driver SNC for 1 phase track system

Invisible to the eye, but essential for perfect track lights

The essence (SNC) drivers have been designed for direct installation in 1-phase tracks. The compact housing combines driver and adapter. As one of the shortest in-track drivers on the market, it creates the basis for scaled-back spotlight and track lighting. In terms of light quality, the 1-phase in-track driver's low flicker value is particularly impressive.

At a glance:

1-Phase in track driver SNC

- Efficiency up to 90 %
- Compatible with all current COBs (Vf 30–42 V)
- Available in black, white and grey

premium series (PRE)

Future-proof and reliable

LED Driver premium series (PRE) is a future-proof generation of LED Drivers characterised by highly advanced functionality and outstanding dimming behaviour.

Operating windows optimised for the intended applications ensure efficient operation of a wide range of LED modules, even across generations.

LED Driver PRE units are also suitable for the Tridonic companion-SUITE software collection.

At a glance: Driver PRE

- Constant-current LED Driver with application-oriented operating windows
- one4all interface supports DALI, DSI, switchDIM and corridorFUNCTION
- Superior dimming performance with stepless amplitude dimming from 100 % to 1 %
- Power range 10–100 W
- High efficiency of up to > 93 %
- Unmatched standby losses of < 0.15 W
- ready2mains technology permits configuration via companionSUITE
- I-SELECT 2 interface for setting the current on the primary side
- Large number of designs including the new Stretched Compact

excite series (EXC)

Flexible configuration

The new LED Driver excite series (EXC) devices feature the programmable ready2mains (220–240 V) interface.

At the same time, the cost-efficient LED Driver provides the benefits of fixed-output devices, including simple installation without additional cabling or DALI addressing.

With their excellent dimming performance, the LED Driver EXC devices are the professional solution for efficient lighting upgrades and new installations. As before, the luminous flux of a luminaire can be configured via plugs (I-SELECT 2) or via ready2mains (220–240 V), with the added flexibility of being able to set the current in 1mA steps.

At a glance: Driver EXC

- Constant-current LED Driver with application-oriented operating windows
- Output ranges from 10 W to 100 W
- ready2mains technology: configuration via companionSUITE
- High efficiency of up to 95 %
- I-SELECT 2 interface for setting the current on the primary side
- 5-year guarantee
- Large number of designs including the new Stretched Compact housing with attachable cable clamp

Hassle-free wireless

The intuitive path towards wireless luminaire communication

basicDIM Wireless control technology allows versatile and professional interaction with all luminaires within an area – fully intuitive and with no additional wiring required.

The basis for the wireless light management is found in the luminaire with the LED module, a 24 V constant voltage or DALI driver and one of the basicDIM Wireless modules. The control profiles are saved during the luminaire production stage. Users can choose whether to

control the lighting using the 4remote BT App or via the user interface. Up to 250 light points can be conveniently controlled via Bluetooth: switching on and off as well as dimming functions are just as simple as grouping luminaires and creating lighting settings. Tunable White luminaires change their colour temperature to suit the user and the direct and indirect light content are simple to adjust. All the elements for integrating sensors are also in place.

Hassle-free wireless

The intuitive path towards wireless luminaire communication

Wireless communication starts in the luminaire. The user uses the 4remote BT App or user interface to communicate with the basicDIM Wireless modules, which forwards the information to the LED module via the (PRE) DALI driver or the 24 V constant voltage driver.

At a glance: **basicDIM Wireless module**

- DALI Wireless Module
- Forms automatically a wireless communication network with up to 127 nodes

At a glance: **basicDIM Wireless module universal voltage (UNV) 0–10V 2CH**

- Wireless controllable with a Android / iOS smart device
- Forms automatically a wireless communication network with up to 127 nodes
- 2 channel 0–10 V dimmer

At a glance: **basicDIM Wireless module PMW constant voltage (CV) 4CH**

- Can be combined with 24 V constant voltage drivers and applications
- Input voltage: 12–24 V
- Up to 4 LLE FLEX tapes together

At a glance: **basicDIM Wireless passive module**

- Power supply via DALI power line (po4a driver PRE or DALI power supply)
- Perfect integration into basicDIM Wireless's simple wireless light control
- Support of luminaire built-in sensors for daylight sensing and presence detection (MSensor G3 family) from Tridonic

At a glance: **basicDIM Wireless sensor 5DP 38rc UNV**

- Ambient light dependent control and presence detection
- Power supply via mains
- Mounting variants for suspended ceilings and solid ceilings available
- Passive Infrared sensor technology
- Shutters included to focus sensor detection area

basicDIM Wireless integrated driver

The advantages of drivers with integrated basicDIM Wireless technology

With premium (PRE) series drivers, just one device needs to be installed for each luminaire, saving a huge amount of space. Since no additional wiring is required, costs are reduced significantly, too.

Solution with basicDIM Wireless integrated driver

Thanks to the premium (PRE) driver series with integrated basicDIM Wireless technology, luminaires can be constructed with even greater ease.

At a glance: **basicDIM Wireless driver constant current (CC) SC PRE2**

- Dimmable constant current LED driver
- Optimised portfolio of 4 driver variants from 10 W up to 45 W (150 mA – 1,400 mA)
- Nominal life-time up to 100,000 h, 5-year guarantee

At a glance: **basicDIM Wireless driver constant voltage (CV) SC PRE2**

- Dimmable 24 V constant voltage LED driver for flexible LED strips
- Optimised portfolio of 4 driver variants from 35 W up to 150 W
- Nominal life-time up to 50,000 h, 5-year guarantee

At a glance: **basicDIM Wireless driver Tunable White PRE (TW)**

- Independent dimmable constant current 2-channel LED driver
- Adjustable output current via basicDIM Wireless or I-SELECT 2 Plug
- Nominal life-time up to 100,000 h, 5-year guarantee

basicDIM Wireless integrated driver

Thanks to the premium (PRE) driver series with integrated basicDIM Wireless technology, luminaires can be constructed with even greater ease.

LED driver

premium series (PRE)

one4all multichannel DT6 driver

Driver PRE | multichannel DT6

Multiple channels in one driver are ideal for the efficient operation of pendants and floor stands with direct/indirect light or for simple Tunable White applications. The output currents can be set varied via I-SELECT 2 plugs or DALI for each channel. What's more, proportionSWITCH provides the option of selecting from dimming scenes. The one4all interface, which covers DALI DT6, DSI, switchDIM and corridorFUNCTION V2, adds to this high level of flexibility.

premium series (PRE)

Tunable White DT8 driver

Combined with the Tunable White modules from Tridonic, the calibrated kits ensure that the colour locations remain constant throughout all dimming levels, as well as the light flow remains constant when color changes.

Other advantages are provided by the extremely high efficiency of up to 90 percent and the significantly extended dimming range of 1 to 100 percent. Equipped with colourSWITCH and switchDIM, the drivers also combine continuously adjustable, predefined colours and simple control.

essence series (SNC)

Attractive price in proven Tridonic quality

The non-dimmable fixed output LED Driver essence series (SNC) provides the best compromise between an attractive price and qualified performance. With a focus on application-related functions, the fixed current LED Driver range offers good Tridonic proven quality and performance that ensures reliable operation of your LED module.

The LED Drivers are compatible with many LED modules from Tridonic and provide an optimal system solution especially with LED module SLE and LED module DLE.

- At a glance:
Driver SNC
- Fixed output built-in, independent and stretched compact non dimmable constant current LED Driver
 - Full power range to cover all applications and requirements
 - Nominal lifetime up to 50,000 h with 5-year guarantee
 - Installation friendly and flexible: 2.5 mm input terminal
 - For luminaires of protection class I and protection class II
 - Temperature protection as per EN 61347-2-13 C5e

Further details can be found in the datasheet.

Tridonic driver technology for a competitive edge

Toolless strain relief (type SR as well as accessory for SC)

Tridonic offers the most sophisticated strain relief on the market for LED drivers. It can be fitted quickly and without tools by simply attaching it to the SC housing. The SR housings also offer the possibility of loop-through wiring. This makes installation and the connection of electrical cables much faster.

2-channel driver DT8 – constant colorimetric locus across all dimming levels

The second generation drivers guarantee even greater room for manoeuvre in terms of design with the enhanced dimming range of 1% to 100 %. Colour temperatures are controlled precisely and with infinite variability, while the drivers reliably maintain the selected range across all dimming levels. The colourSWITCH function makes it possible to select the colour temperature, while the light can be dimmed with the switchDIM function. With the premium (PRE) category drivers, the Tunable White solution can be controlled via DT8 using a push button or touch panel.

Flicker-free architectural lighting

With the prevalence of LED technology, the subject of flickering lights is increasingly becoming a focal point. As LED light sources react to changes in operating parameters much more quickly than other light sources, the lighting can flicker, which is perceived as irritating. The human eye can detect frequencies up to 80 Hz as flickering light; the most sensitive frequency range is 10 Hz to 30 Hz. The 80 Hz – 2,000 Hz frequency range can cause a so-called “stroboscopic effect”. At present, limit values are being defined for both frequency ranges; from the point of view of standardisation and by the European Commission. LED drivers from Tridonic already achieve values that are significantly lower than the limit values defined, making sure the lighting is always pleasant for those who use it.

Simple configuration – So versatile, so effective

LED drivers from Tridonic are suitable for general use and offer impressive functionality

The operating current is one of the most important parameters for the efficient application-specific use of an LED module. LED Drivers from Tridonic offer the following options for setting this current with a high degree of flexibility:

ready2mains programmer

Simple configuration, without any additional digital interface in the LED Driver. The ready2mains programmer communicates via the mains and therefore provides a simple means of configuring all LED Drivers with the ready2mains interface – including Driver excite series (EXC). The programmer is easy to operate and extremely versatile. It can be operated manually or with predefined scripts, alternatively it can be integrated in automated processes.

I-SELECT 2 interface and ADV Plug

Perfect for manual configuration of a small number of devices. Resistance plugs defined with the required values are simply inserted in the appropriate terminals on Drivers excite (EXC) and premium (PRE) series with I-SELECT 2 Plug and advanced series with ADV plug. Tridonic offers plugs for the most common current values. The I-SELECT 2 interface also enables specific intermediate values to be used. Also available as High Range, Mid Range or Low Range Current set.

one4all interface

LED lighting with DALI, DSI, switchDIM or corridorFUNCTION:

The digital one4all interface ensures proper operation and integration in various lighting control systems.

In addition, all the parameters of driver PRE can be configured for maximum effect. The current can be adjusted in 1mA increments for individual matching to the required luminous fluxes.

- **DALI** (Digital Addressable Lighting Interface) is an interface protocol for digital communication between electronic lighting equipment.
- **DSI** (Digital Serial Interface) enables DSI ECGs to be controlled. The luminaires are switched via the control line irrespective of the cabling for the power supply.
- **switchDIM** works with the mains voltage as a control signal and makes it possible to dim the driver via a push to make switch.
- The **corridorFUNCTION** performs complex processes with ease. Standard motion detectors and luminaires with one4all LED drivers is all that is required to provide presence-controlled lighting. The corridorFUNCTION can be programmed so that if there is no one in the room the light is not switched off – as is the case with non-dimmable ballasts – but dimmed to the minimum level. It can then be switched off automatically after a preset delay.

Multiple programming via Near Field Communication (NFC)

The NFC interface offers the possibility of adjusting currents quickly and easily. Up to 20 drivers can be programmed in a single work step. In connection with the companionSUITE software, production processes can be handled more simply and quickly, and, at the same time, configuration costs can be reduced. Programming is carried out without a 230 V AC supply (Powerless) and without cables (Contactless).
