

### Driver LC 120W 350–1050mA flexC NF h16 EXC4 excite series

#### Product description

- Built-in constant current LED driver
- For luminaires of protection class I
- Adjustable output current between 350 and 1,050 mA via NFC
- Max. output power 120 W
- Up to 93 % efficiency
- Nominal lifetime up to 100,000 h
- 5 years guarantee (conditions at [www.tridonic.com](http://www.tridonic.com))

#### Housing properties

- Low-profile metal casing with white cover
- Only 16 mm housing height
- Type of protection IP20

#### Interfaces

- Near field communication (NFC)
- Terminal blocks: 0° push terminals

#### Functions

- Adjustable output current in 1-mA-steps (NFC)
- Constant light output function (eCLO)
- Protective features (overtemperature, short-circuit, overload, no-load)
- Intelligent Voltage Guard (overvoltage and undervoltage monitoring)
- Suitable for emergency lighting systems acc. to EN 50172

#### Benefits

- Flexible configuration via companionSUITE
- Support NFC multiple programming (full carton box)
- Application-oriented operating window for maximum compatibility
- Best energy savings due to high efficiency
- Reliability proven by lifetime up to 100,000 h and 5 years guarantee

#### Typical applications

- For linear/area lighting in office applications

Standards, page 5

IP20     

### Driver LC 120W 350–1050mA flexC NF h16 EXC4

excite series

#### Technical data

Rated supply voltage	220 – 240 V
AC voltage range	198 – 264 V
DC voltage range	176 – 280 V
Mains frequency	0 / 50 / 60 Hz
Overvoltage protection	320 V AC, 48 h
Typ. current (at 230 V, 50 Hz, full load) <sup>①</sup>	560 mA
Typ. current (220 V, 0 Hz, full load) <sup>②</sup>	580 mA
Leakage current (at 230 V, 50 Hz, full load) <sup>③</sup>	< 700 µA
Max. input power	128 W
Output power range (P <sub>rated</sub> )	77 – 120 W
Typ. efficiency (at 230 V / 50 Hz / full load) <sup>④</sup>	93 %
λ (at 230 V, 50 Hz, full load)	0.99
λ (cover full operating range)	0.7C – 0.99
Typ. input current in no-load operation	46.9 mA
Typ. input power in no-load operation	0.85 W
In-rush current (peak / duration)	51.4 A / 143 µs
THD (at 230 V, 50 Hz, full load)	< 10 %
Starting time (at 230 V, 50 Hz, full load)	< 300 ms
Starting time (DC mode)	< 500 ms
Switchover time (AC/DC) <sup>⑤</sup>	< 500 ms
Turn off time (at 230 V, 50 Hz, full load)	< 30 ms
Output current tolerance <sup>⑥</sup>	± 5 %
Max. output current peak (non-repetitive)	≤ output current + 90 %
Output LF current ripple (< 120 Hz)	± 3 %
Output P <sub>STLM</sub> (at full load)	≤ 1
Output SVM (at full load)	≤ 0.4
Max. output voltage (no-load voltage)	250 V
Mains surge capability (between L - N)	≤ 1 kV
Mains surge capability (between L/N - PE)	≤ 2 kV
Surge voltage at output side (against PE)	≤ 2.5 kV
Type of protection	IP20
Lifetime	up to 100,000 h
Guarantee (conditions at www.tridonic.com)	5 years
Dimensions L x W x H	360 x 30 x 16.3 mm

#### Ordering data

Type	Article number	Packaging carton	Packaging pallet	Weight per pc.
LC 120/350-1050/240 flexC NF h16 EXC4	28004330	10 pc(s).	950 pc(s).	0.2 kg

## Specific technical data

Type	Output current <sup>③</sup>	Min. forward voltage	Max. forward voltage	Max. output power	Typ. power consumption (at 230 V, 50 Hz, full load)	Typ. current consumption (at 230 V, 50 Hz, full load)	Max. casing temperature $t_c$	Ambient temperature $t_a$ max.
LC 120/350-1050/240 flexC NF h16 EXC4	350 mA	45 V	220.0 V	77 W	80.2 W	360 mA	70 °C	-20 ...+60 °C
	400 mA	45 V	220.0 V	88 W	91.7 W	410 mA	70 °C	-20 ...+60 °C
	450 mA	45 V	220.0 V	99 W	102.6 W	457 mA	70 °C	-20 ...+60 °C
	500 mA	45 V	220.0 V	110 W	114.6 W	509 mA	75 °C	-20 ...+60 °C
	550 mA	45 V	218.2 V	120 W	124.3 W	551 mA	75 °C	-20 ...+60 °C
	600 mA	45 V	200.0 V	120 W	124.7 W	553 mA	75 °C	-20 ...+60 °C
	650 mA	45 V	184.6 V	120 W	124.3 W	550 mA	75 °C	-20 ...+60 °C
	700 mA	45 V	171.4 V	120 W	125.0 W	553 mA	80 °C	-20 ...+60 °C
	750 mA	45 V	160.0 V	120 W	125.5 W	556 mA	80 °C	-20 ...+60 °C
	800 mA	45 V	150.0 V	120 W	126.2 W	559 mA	80 °C	-20 ...+60 °C
	850 mA	45 V	141.2 V	120 W	126.7 W	562 mA	80 °C	-20 ...+60 °C
	900 mA	45 V	133.3 V	120 W	127.4 W	564 mA	80 °C	-20 ...+60 °C
	950 mA	45 V	126.3 V	120 W	129.3 W	572 mA	82 °C	-20 ...+55 °C
	1,000 mA	45 V	120.0 V	120 W	128.3 W	568 mA	82 °C	-20 ...+55 °C
	1,050 mA	45 V	114.3 V	120 W	128.0 W	567 mA	82 °C	-20 ...+55 °C

① Depending on the selected output current.

② Valid for immediate change of power supply type otherwise the starting time is valid.

③ Output current is mean value.

④ The table only lists a number of possible operating points but does not cover each single point. The output current can be set within the total value range in 1-mA-steps.

## 1. Standards

EN 55015  
 EN 61000-3-2  
 EN 61000-3-3  
 EN 61347-1  
 EN 61347-2-13  
 EN 62384  
 EN 61547

According to EN 50172 for use in central battery systems

According to EN 60598-2-22 suitable for emergency lighting installations

## 2. Thermal details and lifetime

### 2.1 Expected lifetime

Expected lifetime						
Type	Output current	ta	45 °C	50 °C	55 °C	60 °C
LC 120/350-1050/240 flexC NF h16 EXC4	< 500 mA	tc	55 °C	60 °C	65 °C	70 °C
		Lifetime	>100,000 h	>100,000 h	>100,000 h	80,000 h
	500 – 650 mA	tc	60 °C	65 °C	70 °C	75 °C
		Lifetime	>100,000 h	>100,000 h	>100,000 h	70,000 h
	> 650 – 900 mA	tc	65 °C	70 °C	75 °C	80 °C
		Lifetime	>100,000 h	>100,000 h	70,000 h	50,000 h
> 900 – 1,050 mA	tc	72 °C	77 °C	82 °C	–	
	Lifetime	>100,000 h	70,000 h	50,000 h	–	

The LED driver is designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design.

If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

## 3. Installation / wiring

### 3.1 Circuit diagram

### 3.2 Wiring type and cross section

For wiring use solid wire from 0.5 – 1.5 mm<sup>2</sup>.

Strip 8 – 9 mm of insulation from the cables to ensure perfect operation of terminals.

LED module/LED driver/supply

### 3.3 Loose wiring

**3.4 Wiring guidelines**

- Run the secondary lines separately from the mains connections and lines to achieve good EMC performance.
- The max. secondary cable length is 2 m (4 m circuit).
- For good EMC performance, keep the LED wiring as short as possible.
- Secondary switching is not permitted.
- The LED driver has no inverse-polarity protection on the secondary side. Wrong polarity can damage LED modules with no inverse-polarity protection.
- Wrong wiring of the LED driver can lead to malfunction or irreparable damage.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

**3.5 Hot plug-in**

Hot plug-in is not supported due to residual output voltage of > 0 V up to mains voltage. Danger to life. When connecting an LED load, restart the device to activate the LED output. This can be done via mains reset.

**3.6 Earth connection**

Suitable for luminaires of protection class I only. The earth connection is conducted as protection earth (PE). The LED driver can be earthed via earth terminal or metal housing.

**4. Electrical values**

**4.1 Operating window**

Make sure that the LED driver is operated within the given window under all operating conditions. Coming below the specified minimum output voltage of the LED driver may cause the device to shut-down.

Make sure that the LED driver is operated within the given window under all operating conditions. Special attention needs to be paid at dimming and DC emergency operation as the forward voltage of the connected LED modules varies with the dimming level, due to the implemented amplitude dimming technology. Coming below the specified minimum output voltage of the LED driver may cause the device to shut-down. See chapter "6.3 Light level in DC operation" for more information.

**4.2 Efficiency vs load**

**4.3 Power factor vs load**

**4.4 THD vs load (without harmonic < 5 mA or 0.6 % of the input current)**

100 % load corresponds to the max. output power (full load) according to the table on page 2.

#### 4.5 Maximum loading of automatic circuit breakers in relation to inrush current

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrush current	
Installation Ø	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	I <sub>max</sub>	time
<b>LC 120/350-1050/240 flexC NF h16 EXC4</b>	16	21	26	35	10	13	16	21	51.4 A	143 µs

These are max. values calculated out of inrush current! Please consider not to exceed the maximum rated continuous current of the circuit breaker.

Calculation uses typical values from ABB series S200 as a reference.

Actual values may differ due to used circuit breaker types and installation environment.

#### 4.6 Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load) in %

	THD	3.	5.	7.	9.	11.
<b>LC 120/350-1050/240 flexC NF h16 EXC4</b>	< 10	< 10	< 5	< 5	< 5	< 3

Acc. to 61000-3-2. Harmonics < 5 mA or < 0.6 % (whatever is greater) of the input current are not considered for calculation of THD.

## 5. Software / Programming / Interfaces

### 5.1 Software / programming

With appropriate software and interface different functions can be activated and various parameters can be configured in the LED driver. The Driver supports the following software and interfaces:

Software for configuration:

- companionSUITE (deviceGENERATOR, deviceCONFIGURATOR, deviceANALYSER, 4service NFC app)

Interfaces for data transfer:

- NFC

### 5.2 Nearfield communication (NFC)

The NFC Interface allows wireless communication with the LED driver.

This interface offers the option to write configuration and to read configuration, errors and events with the companionSUITE.

A correct communication between the LED driver and the NFC antenna can only be guaranteed if the antenna is placed directly on the Driver.

Any material placed between the LED driver and the NFC antenna can cause a deterioration of the communication quality.

After programming the device via NFC power up the device one time for one second till the deviceANALYSER can read out the parameters.

We recommend the use of following NFC antenna:

[www.tridonic.com/nfc-readers](http://www.tridonic.com/nfc-readers)

With a suitable NFC antenna several devices can be programmed at the same time (NFC multiprogramming).

NFC is complied with ISO/IEC 15963 standard.

## 6. Functions

 companionSUITE:

NFC

The companionSUITE with deviceGENERATOR, deviceCONFIGURATOR and deviceANALYSER is available via our WEB page:

<https://www.tridonic.com/com/en/products/companionsuite.asp>

Icon	Function	NFC
	LED current	
	Enhanced constant light output (eCLO)	
	Application Protection	

### 6.1 LED current

The LED output current must be adapted to the connected LED module. The value is limited by the current range of the respective device.

The output current of the LED driver can be adjusted in a certain range. Adjustment is done by companionSUITE via NFC.

### 6.2 Enhanced Constant Light Output (eCLO)

With this function the light output of the LED module can be kept equal over the lifetime.

The light output of an LED module reduces over the course of its lifetime. The Constant Light Output (eCLO) function compensates for this natural decline by constantly increasing the output current of the LED driver throughout its lifetime.

Enhanced eCLO shall be achieved by limitation of the LED current at the commissioning of the LED driver and providing a linear interpolation of the current over the time, depending on the data points given by the user.

The user has to insert up to eight pairs of data (time, level).

The output curve is the result of connecting the user data points linear.

Detailed description for eCLO see product manual.

Actual current value could be around 0 – 2.5 % lower than the ideal value between two CLO steps in addition to the output current tolerance.

The minimal CLO starting point is limited by the smallest output current of the LED driver.

### 6.3 Light level in DC operation

The LED driver is designed to operate on DC voltage and pulsed DC voltage. For a reliable operation, make sure that also in DC emergency operation the LED driver is run within the specified conditions as stated in chapter “4.1 operating window”.

Light output level in DC operation is 100 % (EOFi = 0.9).

The voltage-dependent input current of Driver incl. LED module is depending on the used load.

The voltage-dependent no-load current of Driver (without or defect LED module) is for:

AC: < 53 mA

DC: < 2.6 mA

### 6.4 Application Protection

This function allows to prevent access from the 4serviceAPP to the driver. Access to the driver with the deviceCONFIGURATOR via NFC is still possible.

## 7. Protective features

### 7.1 Overtemperature protection

The LED driver is protected against temporary thermal overheating. If the temperature limit is exceeded the output current of the LED module(s) is reduced. The temperature protection is activated above  $t_{c\ max}$ . The activation temperature differs depending on the LED load. On DC operation this function is deactivated to fulfill emergency requirements.

### 7.2 Short-circuit behaviour

In case of a short-circuit at the LED output the LED output is switched off. After restart of the LED driver the output will be activated again. The restart can be done via mains reset.

### 7.3 No-load operation

The LED driver will not be damaged in no-load operation. The output will be deactivated and is therefore free of voltage. If a LED load is connected the device has to be restarted before the output will be activated again.

### 7.4 Overload protection

If the maximum load is exceeded by a defined internal limit, the LED driver turns off the LED output. After restart of the LED driver the output will be activated again. The restart can be done via mains reset.

### 7.5 Insulation between terminals

Insulation	Mains	PE	LED
Mains	–	basic	–
PE	basic	–	basic
LED	–	basic	–

basic ... represents basic insulation.

## 8. Miscellaneous

### 8.1 Insulation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to EN 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V<sub>DC</sub> for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The insulation resistance must be at least 2 MΩ.

As an alternative, EN 60598-1 Annex Q describes a test of the electrical strength with 1500 V<sub>AC</sub> (or 1.414 x 1500 V<sub>DC</sub>). To avoid damage to the electronic devices this test must not be conducted.

### 8.2 Conditions of use and storage

Humidity: 5% up to max. 85%,  
not condensed  
(max. 56 days/year at 85%)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be acclimatised to the specified temperature range ( $t_a$ ) before they can be operated.

The LED driver is declared as inbuilt LED controlgear, meaning it is intended to be used within a luminaire enclosure. If the product is used outside a luminaire, the installation must provide suitable protection for people and environment (e.g. in illuminated ceilings).

### 8.3 Maximum number of switching cycles

All LED driver are tested with 50,000 switching cycles. The actually achieved number of switching cycles is significantly higher.

### 8.4 Additional information

Additional technical information at [www.tridonic.com](http://www.tridonic.com) → Technical Data

Lifetime declarations are informative and represent no warranty claim. No warranty if device was opened.
