# TRIDONIC

## IP20 SELV 🖲 🤍 🗉 [Ĥ[ @ @ C € ∰ Rohs]

# Driver LCAI 20W 150mA-400mA ECO lp

ECO series

- Dimmable built-in LED Driver for LED
- Constant current LED Driver
- Output current adjustable between 150 400 mA
- Max. output power 20 W
- Nominal life-time up to 100,000 h
- 5-year guarantee
- Dimming range 1 ... 100 %

#### Properties

- Low-profile metal casing with white cover
- Type of protection IP20

#### Interfaces

- DALI DEVICE Type 6
- DSI
- switchDIM (with memory function)
- corridorFUNCTION

#### Functions

- Adjustable output current (I-select resistor or DALI)
- Power-up fading at AC
- Intelligent Temperature Guard (overtemperature protection)
- Short-circuit proof
- Overload protection
- Constant Light Output function
- Suitable for emergency escape lighting systems acc. to EN50172

### Technical data

recinical uala	
Rated supply voltage	220 – 240 V
AC voltage range	198 – 264 V
DC voltage range	176 – 280 V
Mains frequency	0 / 50 / 60 Hz
Overvoltage protection	320 V AC, 48 h
Typ. current (at 230 V, 50 Hz, full load) <sup>①</sup> <sup>②</sup>	50 – 105 mA
Typ. current (220 V, 0 Hz, full load, 15 % dimming level)	)® 18 – 19 mA
Leakage current (PE)	< 0.5 mA
Max. input power	25 W
Typ. efficiency (at 230 V / 50 Hz / full load)®	80 – 87 %
λ (at 230 V, 50 Hz, full load) <sup>®</sup>	0.83 – 0.95
Typ. power input on stand-by®	120 – 140 mW
THD (at 230 V, 50 Hz, full load)	< 22 %
Time to light (at 230 V, 50 Hz, full load, acc. to DALI)	< 0.6 s
Time to light (DC mode )	< 0.4 s
Switchover time (AC/DC)	< 0.4 s
Turn off time (at 230 V, 50 Hz, full load)	< 50 ms
Hold on time (at 230 V, 50 Hz, full load)®	15 ms
Output current tolerance <sup>①</sup> ⑦	± 3 %
Output LF current ripple (< 120 Hz)	< 2 %
Max. peak output current	≤ output current + 18 %
PWM frequency®	500 Hz
Dimming range	1 – 100 %
Max. output voltage	60 V
Burst / surge peaks output side against PE	< 500 V
Dimensions L x W x H	280 x 30 x 21 mm

**I-SELECT PLUG TOP / ECO** 

#### Product description

- Ready-for-use resistor to set output current value
- Compatible with LED Driver series TOP and ECO
- Resistor is base isolated
- Resistor power 0.25 W
- Resistor value tolerance ± 1 %

#### Standards

EN 55015 EN 61000-3-2 EN 61000-3-3 EN 61347-1 EN 61347-2-13 EN 62384 EN 61547 EN 62386-101 (according to DALI standard V1) EN 62386-102 EN 62386-207 According to EN 50172 for use in central battery systems According to EN 60598-2-22 suitable for emergency lighting installations

#### **Overload protection**

If the output voltage range is exceeded the LED Driver turns off the LED output. After restart of the LED Driver the output will be activated again. The restart can either be done via mains reset or via interface (DALI, DSI, switchDIM).

#### **Overtemperature protection**

The LED Driver is protected against temporary thermal overheating. If the temperature limit is exceeded the output current of the LED is reduced. The temperature protection is activated approx. +5 °C above tc max (see page 2). On DC operation this function is deactivated to fulfill emergency requirements.

#### Short-circuit behaviour

In case of a short circuit at the LED output the LED output is switched off. After restart of the LED Driver the output will be activated again. The restart can either be done via mains reset or via interface (DALI, DSI, switchDIM).

#### **No-load operation**

The LED Driver will not be damaged in the no-load operation. The output will be deactivated and therefore free of voltage. If a LED load is connected the device has to be restarted before the output will be activated again.

Ex	pected	life-ti	m

Type ta	50 °C	55 °C	60 °C	65 °C
LCAI 20W 150mA-400mA ECO lp	65 °C	70 °C	75 °C	80 °C
Life-t	ime > 100,000 h	100,000 h	70,000 h	50,000 h

The LED Driver is designed for a life-time stated above under reference conditions and with a failure probability of less than 10 %.

#### Maximum loading of automatic circuit breakers

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrush current

Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load) in %									
	THD	3.	5.	7.	9.				
LCAI 20W 150mA-400mA ECO lp	< 22	< 27	< 10	< 7	< 5				

#### Hot plug-in

Hot plug-in is not recommend within 5 s after shutdown due to output voltage of > 0 V. If a LED load is connected the device has to be restarted before the output will be activated again.

This can be done with mains reset, DALI, DSI or switchDIM.

#### Conditions of use and storage

5 % up to max. 85 %, not condensed (max. 56 days/year at 85 %)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be within the specified temperature range (ta) before they can be operated.

#### Control input (DA/N, DA/L)

Digital DALI signal or switchDIM can be wired on the same terminals (DA/N and DA/L).

#### Digital signal DALI/DSI

The control input is non-polar for digital control signals (DALI, DSI). The control signal is not SELV. Control cable has to be installed in accordance to the requirements of low voltage installations. Different functions depending on each module.

#### switchDIM

Integrated switchDIM function allows a direct connection of a push to make switch for dimming and switching.

Brief push (< 0.6 s) switches LED Driver ON and OFF. The LED Drivers switch-ON at light level set at switch-OFF.

When the push to make switch is held, LED modules are dimmed. After repush the LED modules are dimmed in the opposite direction. In installations with LED Drivers with different dimming levels or opposite dimming directions (e.g. after a system extension), all LED Drivers can be synchronized to 50 % dimming level by a 10 s push.

Use of push to make switch with indicator lamp is not permitted.

#### corridorFUNCTION

The corridorFUNCTION can be programmed in two different ways. To program the corridorFUNCTION by means of software a DALI-USB interface is needed in combination with a DALI PS. The software can be the masterCONFIGURATOR.

To activate the corridorFUNCTION without using software a voltage of 230 V simply has to be applied for five minutes at the switchDIM connection. The unit will then switch automatically to the corridorFUNCTION.

#### Note:

If the corridorFUNCTION is wrongly activated in a switchDIM system (for example a switch is used instead of pushbutton), there is the option of installing a pushbutton and deactivating the corridorFUNCTION mode by five short pushes of the button within three seconds.

switchDIM and corridorFUNCTION are very simple tools for controlling ballasts with conventional momentary-action switches or motion sensors. To ensure correct operation a sinusoidal mains voltage with a frequency of 50 Hz or 60 Hz is required at the control input.

Special attention must be paid to achieving clear zero crossings. Serious mains faults may impair the operation of switchDIM and corridorFUNCTION.

#### Dimming

Dimming range 1 % to 100 % Digital control with:

- DSI signal: 8 bit Manchester Code Speed 1% to 100 % in 1.4 s
- DALI signal: 16 bit Manchester Code Speed 1% to 100% in 0.2 s Programmable parameter: Minimum dimming level Maximum dimming level Default minimum = 1% Programmable range 1%  $\leq$  MIN  $\leq$  100% Default maximum = 100% Programmable range 100%  $\geq$  MAX  $\geq$  1%

Dimming curve is adapted to the eye sensitiveness.

Dimming is realized by a combination of analog amplitude dimming and PWM dimming.

35 ... 100 %: amplitude dimming 1 ... 34 %: PWM dimming

#### Dimming characteristics

Digital dimming value

Dimming characteristics as seen by the human eye

#### DC emergency operation

The LED Driver is designed for operation on DC voltage and pulsed DC voltage.

Light output level in DC operation: programmable 1 – 100 % (EOFx = 0.13). Programming by extended DSI or DALI signal (16 bit). Default value is 15 % In DC operation dimming mode can be activated.

The voltage-dependent input current of Driver incl. LED module is depending on the used load.

The voltage-dependent no-load current of Driver (without or defect LED module) is for: AC: 12.5 mA DC: 3.0 mA

#### Function: adjustable current (I-select)

The output current of the LED Driver can be selected between 150 and 400 mA. For adjustment there are two options available.

#### Option 1: "I-select resistor"

In 25 mA steps adjustable (see page 2, specific technical data, "I-select resistor value").

Relationship between output current and resistor value can be found at the table "Specific technical data". Resistor values specified from standardised resistor value ranges. Resistor value tolerance has to be  $\leq$  1%. Resistor power has to be  $\geq$  0.1 W.

If the resistor is connected with wires a max. wire length of 2 m may not be exceeded and possible interferences have to be avoid.

Resistors for the main output current values can be ordered from Tridonic (see accessories).

#### Option 2: DALI

Adjustment is done by masterCONFIGURATOR (see masterCONFIGURATOR documentation).

#### Constant light output (CLO)

The luminous flux of an LED decreases constantly over the life-time. The CLO function ensures that the emitted luminous flux remains stable. For that purpose the LED current will increas continously over the LED life-time. In masterCONFIGURATOR it is possible to select a start value (in percent) and an expected life-time. The LED Driver adjusts the current afterwards automatically.

#### Power-up fading

The power-up fading function offers the opportunity to realise a soft start. The soft start will be applied at turning on the mains and at starts by switchDIM.

The function is programmed as a DALI fade time in the range from 0.7 to 16 seconds and dimms in the selected time from 0 % to the power-on level. By factory default power-up fading is not active (0 seconds).

#### Programming

With appropriate software and a USB interface different functions can be activated and various parameters can be configured in the LED Driver. All that is needed is a DALI-USB and the software (masterCONFIGURATOR).

#### masterCONFIGURATOR

#### At version 2.8:

For programming functions (CLO, I-select, power-up fading, corridorFUNCTION) and device settings (fade time, ePowerOnLevel, DC level, etc.). For further information see masterCONFIGURATOR manual.

#### **Electrical connections**

#### Wiring

LED module/LED Driver/supply

#### Wiring type and cross section

Solid wire with a cross section of 0.5 - 1.5 mm<sup>2</sup>. Strip 8 - 9 mm of insulation from the cables to ensure perfect operation of terminals.

#### Wiring guidelines

- The cables should be run separately from the mains connections and mains cables to ensure good EMC conditions.
- The LED wiring should be kept as short as possible to ensure good EMC. The max. secondary cable length is 2 m (4 m circuit), this applies for LED output as well as for I-select.
- · Secondary switching is not permitted.
- The LED Driver has no inverse-polarity protection on the secondary side.
  Wrong polarity can damage LED modules with no inverse-polarity protection.

#### Earth connection

The earth connection is conducted as protection earth (PE). The LED Driver can be earthed via earth terminal or metal housing. If the LED Driver will be earthed, protection earth (PE) has to be used. There is no earth connection required for the functionality of the LED Driver.

Earth connection is recommended to improve following behaviour.

- Electromagnetic interferences (EMI)
- LED glowing at stand-by
- Transmission of mains transients to the LED output

In general it is recommended to earth the LED Driver if the LED module is mounted on earthed luminaire parts respectively heat sinks and thereby representing a high capacity against earth.

#### Installation note

Max. torque at the clamping screw: 0.5 Nm / M4

#### Circuit diagram

#### Isolation and electric strength testing of luminaires

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with  $500 V_{DC}$  for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal. The isolation resistance must be at least  $2 M\Omega$ .

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V  $_{AC}$  (or 1.414 x 1500 V  $_{DC}$ ). To avoid damage to the electronic devices this test must not be conducted.
