

**Driver LCA 100W 24V one4all SC PRE**  
premium series 24 V – dimmable (IP20)

## Product description

- NEW: lumDATA (Luminaire data, Energy reporting and Diagnostics & Maintenance)
- Dimmable 24 V constant voltage LED driver for flexible constant voltage strips
- Can be either used built-in or independent with clip-on strain-relief (see data sheet chapter: 1. Standards)
- One4all interface and ready2mains enable different dimming options
- Dimming range 1 to 100 %
- No additional external dimmer is needed
- Suitable for emergency escape lighting systems acc. to EN 50172
- Nominal lifetime up to 50,000 h
- 5 years guarantee (conditions at [www.tridonic.com](http://www.tridonic.com))

## Typical application

- Cove lighting, facade accent lighting, ceiling integration

## Technical details

- 24 V, 100 W
- Small design (295 x 43 x 30 mm) with stretched-compact strain relief
- Small cross section
- Push terminal for simple wiring
- Output terminals (+/-) equipped twice for more flexibility in the application

## Interfaces

- one4all (DALI DT 6, DSI, switchDIM, corridorFUNCTION)
- ready2mains (configuration and dimming via mains)
- Terminal blocks: 45° push terminals

## System solution

- Tridonic LLE-FLEX ADV 600, 1,200, 1,800 lm/m
- Tridonic LLE-FLEX EXC 600, 1,200, 1,800, 2,500 lm/m
- In connection with Flex accessories wire to PCB plug
- Test the function of third party light sources before use at low dimming levels to ensure the dimming function works perfectly

**Standards**, page 3

### Driver LCA 100W 24V one4all SC PRE

premium series 24 V – dimmable (IP20)

#### Technical data

Rated supply voltage	220 – 240 V
AC voltage range	198 – 264 V
DC voltage range	176 – 280 V
Mains frequency	0 / 50 / 60 Hz
Overvoltage protection	320 V AC, 48 h
Typ. current (at 230 V, 50 Hz, full load) <sup>①</sup>	468 mA
Typ. current (220 V, 0 Hz, full load, 15 % dimming level)	93 mA
Leakage current (at 230 V, 50 Hz, full load) <sup>①</sup>	< 260 µA
Max. input power	111 W
Typ. efficiency (at 230 V / 50 Hz / full load)	93 %
λ (at 230 V, 50 Hz, full load) <sup>①</sup>	0.99
Typ. power consumption on stand-by <sup>②</sup>	< 0.2 W
Typ. input current in no-load operation	40.4 mA
Typ. input power in no-load operation <sup>②</sup>	2.6 W
In-rush current (peak / duration)	43 A / 280 µs
THD (at 230 V, 50 Hz, full load) <sup>①</sup>	< 5.7 %
Starting time (at 230 V, 50 Hz, full load) <sup>①</sup>	< 0.35 s
Starting time (DC mode)	< 0.32 s
Switchover time (AC/DC) <sup>③</sup>	< 0.3 s
Turn off time (at 230 V, 50 Hz, full load)	< 20 ms
Output voltage tolerance	± 1 V
Output LF voltage ripple (< 120 Hz)	± 5 %
Max. output voltage (no-load voltage)	60 V
PWM frequency	≥ 1 kHz
Dimming range	1 – 100 %
Mains surge capability (between L – N)	1 kV
Mains surge capability (between L/N – PE)	2 kV
Lifetime	up to 50,000 h
Guarantee (conditions at www.tridonic.com)	5 years
Dimensions L x W x H	295 x 43 x 29.8 mm

With strain-relief

Without strain-relief

#### Ordering data

Type	Article number	Packaging carton <sup>④</sup>	Packaging pallet	Weight per pc.
<b>Multi packaging</b>				
<b>LCA 100W 24V one4all SC PRE</b>	<b>28001253</b>	10 pc(s).	390 pc(s).	0.254 kg
<b>Single packaging</b>				
<b>LCA 100W 24V one4all SC PRE SP</b>	<b>28001922</b>	10 pc(s).	480 pc(s).	0.254 kg

<sup>④</sup> The strain relief is included in both packaging variants.  
In the single packaging each Driver has also an individual packaging.

#### Specific technical data

Type	Load	Forward voltage	Output current	Max. output power (at full load)	Typ. power consumption (at full load)	Typ. current consumption (at full load)	Max. casing temperature tc	Ambient temperature ta max.
<b>LCA 100W 24V one4all SC PRE</b>	10 %	24 V	417 mA	10 W	12.9 W	75 mA	80 °C	-25 ... +50 °C
	20 %	24 V	833 mA	20 W	23.3 W	119 mA	80 °C	-25 ... +50 °C
	30 %	24 V	1,250 mA	30 W	33.8 W	163 mA	80 °C	-25 ... +50 °C
	40 %	24 V	1,667 mA	40 W	44.3 W	206 mA	80 °C	-25 ... +50 °C
	50 %	24 V	2,083 mA	50 W	54.8 W	250 mA	80 °C	-25 ... +50 °C
	60 %	24 V	2,500 mA	60 W	65.2 W	294 mA	80 °C	-25 ... +50 °C
	70 %	24 V	2,917 mA	70 W	75.7 W	337 mA	80 °C	-25 ... +50 °C
	80 %	24 V	3,333 mA	80 W	86.2 W	381 mA	80 °C	-25 ... +50 °C
	90 %	24 V	3,750 mA	90 W	96.6 W	425 mA	80 °C	-25 ... +50 °C
	100 %	24 V	4,167 mA	100 W	107.1 W	468 mA	80 °C	-25 ... +45 °C

<sup>①</sup> Valid at 100 % dimming level.

<sup>②</sup> Depending on the DALI traffic at the interface.

<sup>③</sup> Valid for immediate change of power supply type otherwise the starting time is valid.

## 1. Standards

EN 55015  
EN 61000-3-2  
EN 61000-3-3  
EN 61347-1  
EN 61347-2-13  
EN 62384  
EN 61547  
EN 62386-101 (according to DALI standard V2)  
EN 62386-102  
EN 62386-207  
According to EN 50172 for use in central battery systems  
According to EN 60598-2-22 suitable for emergency lighting installations

Housing fulfills requirements for reinforced insulation according EN 60598-1.

### 1.1 Glow wire test

according to EN 61347-1 with increased temperature of 850 °C passed.

## 2. Thermal details and lifetime

### 2.1 Expected lifetime

Expected lifetime					
Type	Output load	ta	40 °C	45 °C	50 °C
LCA 100W 24V one4all SC PRE	≤ 90 W	tc	70 °C	75 °C	80 °C
		Lifetime	>100,000 h	75,000 h	50,000 h
	> 90 W	tc	75 °C	80 °C	–
		Lifetime	75,000 h	50,000 h	–

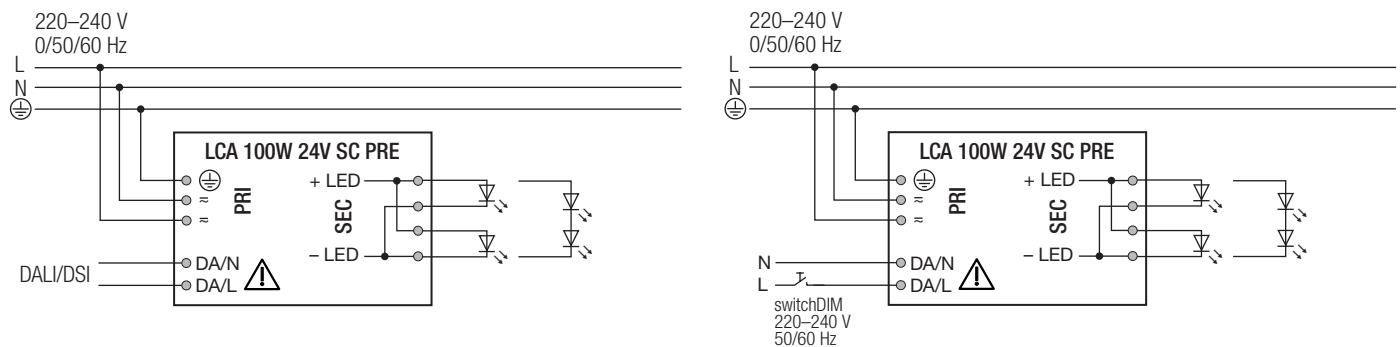

The LED control gear is designed for a lifetime stated above under reference conditions and with a failure probability of less than 10 %.

The relation of tc to ta temperature depends also on the luminaire design.

If the measured tc temperature is approx. 5 K below tc max., ta temperature should be checked and eventually critical components (e.g. ELCAP) measured. Detailed information on request.

## 3. Installation / wiring

### 3.1 Circuit diagram

### 3.2 Wiring type and cross section

#### Mains supply wires

For wiring use stranded wire with ferrules or solid wire from 0.2 – 1.5 mm<sup>2</sup>.  
For perfect function of the push-wire terminals (WAGO 250) the strip length should be 8.5 – 9.5 mm.  
Use one wire for each terminal connector only.

#### Secondary wires (LED module)

For wiring use stranded wire with ferrules or solid wire from 0.2 – 1.5 mm<sup>2</sup> (24AWG – 16AWG).  
For perfect function of the push-wire terminals (Phoenix SPTAF 1/4-5,0-IL) the strip length should be 8 mm.  
Use one wire for each terminal connector only.

Secondary strain relief for cables with bigger cable sheath

Secondary strain relief for cable with smaller cable sheath

### 3.3 Loose wiring

#### Mains supply wires

#### Release of the wiring

Press down the "push button" and remove the cable from front.

#### Secondary wires (LED module)

### 3.4 Fixing conditions when using as independent Driver with Clip-On

Dry, acidfree, oilfree, fatfree. It is not allowed to exceed the maximum ambient temperature (ta) stated on the device. Minimum distances stated below are recommendations and depend on the actual luminaire.  
Is not suitable for fixing in corner.

### 3.5 Wiring guidelines

- Run the secondary lines separately from the mains connections and lines to achieve good EMC performance.
- The max. secondary cable (LED module) length is 2 m (4 m circuit).
- For good EMC performance, keep the LED wiring as short as possible.
- To comply with the EMC regulations run the secondary wires (LED module) in parallel.
- Secondary switching is not permitted.
- The LED driver has no inverse-polarity protection on the secondary side. Wrong polarity can damage LED modules with no inverse-polarity protection.
- Wrong wiring of the LED driver can lead to malfunction or irreparable damage.
- To avoid the damage of the Driver, the wiring must be protected against short circuits to earth (sharp edged metal parts, metal cable clips, louver, etc.).

### 3.6 Hot plug-in

Hot plug-in is not supported due to residual output voltage of > 0 V.  
When connecting an LED load, restart the device to activate the LED output. This can be done via mains reset or via interface (DALI, DSI, switchDIM, ready2mains).

### 3.7 Earth connection

The earth connection is conducted as protection earth (PE). The LED driver can be earthed via earth terminal. If the LED driver will be earthed, protection earth (PE) has to be used. There is no earth connection required for the functionality of the LED driver. Earth connection is recommended to improve following behaviour:

- Electromagnetic interferences (EMI)
- LED glowing at standby
- Transmission of mains transients to the LED output

In general it is recommended to earth the LED driver if the LED module is mounted on earthed luminaire parts respectively heat sinks and thereby representing a high capacity against earth.

### 3.9 Control terminals

There is a risk of electric shock when touching these terminals in case of failure.

## 4. Electrical values

### 4.1 Efficiency vs. load

### 4.4 Input current vs. Load

### 4.2 Power factor vs. Load

### 4.5 THD vs. Load

### 4.3 Input power vs. Load

#### 4.6 Maximum loading of automatic circuit breakers in relation to inrush current

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrush current	
Installation Ø	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	1.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	2.5 mm <sup>2</sup>	I <sub>max</sub>	time
<b>LCA 100W 24V one4all SC PRE</b>	12	16	18	26	6	8	9	13	43 A	280 µs

These are max. values calculated out of inrush current! Please consider not to exceed the maximum rated continuous current of the circuit breaker.  
Calculation uses typical values from ABB series S200 as a reference.  
Actual values may differ due to used circuit breaker types and installation environment.

#### 4.7 Harmonic distortion in the mains supply (at 230 V / 50 Hz and full load) in %

	THD	3.	5.	7.	9.	11.
<b>LCA 100W 24V one4all SC PRE</b>	5	5	2	1	1	1

#### 4.8 Dimming

Dimming range 1 % to 100 %

Digital control with:

- DSI signal: 8 bit Manchester Code  
Speed 1 % to 100 % in 1.4 s
- DALI signal: 16 bit Manchester Code  
Speed 1 % to 100 % in 0.2 s  
Programmable parameter:  
Minimum dimming level  
Maximum dimming level  
Default minimum = 1 %  
Programmable range 1 % ≤ MIN ≤ 100 %  
Default maximum = 100 %  
Programmable range 100 % ≥ MAX ≥ 1 %

Dimming is realized by PWM dimming.

#### 4.9 Dimming characteristics

Digital dimming value

Dimming characteristics as seen by the human eye

### 5. Interfaces / communication

#### 5.1 Control input (DA/N, DA/L)

Digital DALI signal or switchDIM can be wired on the same terminals (DA/N and DA/L).

The control input is non-polar for digital control signals (DALI, DSI).  
The control signal is not SELV. Control cable has to be installed in accordance to the requirements of low voltage installations.  
Different functions depending on each module.

#### 5.2 switchDIM

Integrated switchDIM function allows a direct connection of a pushbutton for dimming and switching.

Brief push (< 0.6 s) switches LED control gear ON and OFF. The dimm level is saved at power-down and restored at power-up.

When the pushbutton is held, LED modules are dimmed. After repush the LED modules are dimmed in the opposite direction.

In installations with LED control gears with different dimming levels or opposite dimming directions (e.g. after a system extension), all LED control gears can be synchronized to 50 % dimming level by a 10 s push.

Use of pushbutton with indicator lamp is not permitted.

#### 5.3 Light level in DC operation

The LED driver is designed for operation on DC voltage and pulsed DC voltage.

Light output level in DC operation: programmable 1 – 100 % (EOFu = 0.13).  
Programming by DALI or ready2mains.

In DC operation dimming mode can be activated.

The voltage-dependent input current of Driver incl. LED module is depending on the used load.

The voltage-dependent no-load current of Driver (without or defect LED module) is for:

AC: < 40 mA

DC: < 11 mA

## 6. Functions

### 6.1 ready2mains – configuration

The ready2mains interface can be used to configure the main parameters of LED drivers via the mains wiring, such as CLO and DC level. These parameters can be adjusted either via ready2mains-capable configuration software or directly via the ready2mains programmer.

### 6.2 ready2mains – dimming

ready2mains allows for mains-based group dimming, controlled via the ready2mains protocol and appropriate dimming interfaces.

For details on the operation of ready2mains and its components see the relevant technical information.

### 6.3 Short-circuit behaviour

In case of a short-circuit at the LED output the LED output is switched off. After restart of the LED driver the output will be activated again. The restart can either be done via mains reset or via interface (DALI, DSI, switchDIM, ready2mains). Open circuit lamp failure is not recognized.

### 6.4 Overload protection

If the maximum load is exceeded by a defined internal limit, the LED driver turns off the LED output. After restart of the LED driver the output will be activated again. The restart can either be done via mains reset or via interface (DALI, DSI, switchDIM, ready2mains).

### 6.5 Overtemperature protection

The LED driver is protected against temporary thermal overheating. If the temperature limit is exceeded the output current of the LED module(s) is reduced. The temperature protection is activated above  $t_{c\ max}$ . The activation temperature differs depending on the LED load. On DC operation this function is deactivated to fulfill emergency requirements.

### 6.6 corridorFUNCTION

The corridorFUNCTION can be programmed in two different ways. To program the corridorFUNCTION by means of software a DALI-USB interface is needed in combination with a DALI PS. The software can be the masterCONFIGURATOR. To activate the corridorFUNCTION without using software a voltage of 230 V has to be applied for five minutes at the switchDIM connection. The unit will then switch automatically to the corridorFUNCTION.

Note:

If the corridorFUNCTION is wrongly activated in a switchDIM system (for example a switch is used instead of pushbutton), there is the option of installing a pushbutton and deactivating the corridorFUNCTION mode by five short pushes of the button within three seconds.

switchDIM and corridorFUNCTION are very simple tools for controlling gears with conventional pushbuttons or motion sensors. To ensure correct operation a sinusoidal mains voltage with a frequency of 50 Hz or 60 Hz is required at the control input. Special attention must be paid to achieving clear zero crossings. Serious mains faults may impair the operation of switchDIM and corridorFUNCTION.

### 6.7 Constant light output (CLO)

The luminous flux of an LED decreases constantly over the lifetime. The CLO function ensures that the emitted luminous flux remains stable. For that purpose the LED current will increase continuously over the LED lifetime. In masterCONFIGURATOR it is possible to select a start value (in percent) and an expected lifetime. The LED driver adjusts the current afterwards automatically.

### 6.8 Power-up/-down fading

The power-up/-down function offers the opportunity to modify the on-/off behavior. The time for fading on or off can be adjusted in a range of 0.2 to 16 seconds. According to this value, the device dims either from 0 % up to the power-on level or from the current set dim level down to 0 %. This feature applies while operating via switchDIM, ready2mains and when switching the mains voltage on or off. By factory default no fading time is set (= 0 seconds).

### 6.9 Software / programming

With appropriate software and a interface different functions can be activated and various parameters can be configured in the LED driver. To do so, a DALI-USB or ready2mains programmer and the software (masterCONFIGURATOR) are required.

### 6.10 masterCONFIGURATOR

From version 2.8:

For programming functions (CLO, power-up fading, corridorFUNCTION) and device settings (fade time, ePowerOnLevel, DC level, etc.).

For further information see masterCONFIGURATOR manual.

### 6.11 deviceCONFIGURATOR

PC (windows) based software application to transfer parameters into our drivers.

Workflow optimised for the use in OEM production line.

For further information see deviceCONFIGURATOR manual.

## **7. Miscellaneous**

### **7.1 Insulation and electric strength testing of luminaires**

Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an insulation test with 500 V<sub>DC</sub> for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal.  
The insulation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V<sub>AC</sub> (or 1.414 x 1500 V<sub>DC</sub>). To avoid damage to the electronic devices this test must not be conducted.

### **7.2 Conditions of use and storage**

Humidity: 5 % up to max. 85 %,  
not condensed  
(max. 56 days/year at 85 %)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be acclimatised to the specified temperature range (ta) before they can be operated.

The LED driver is declared as inbuilt LED controlgear, meaning it is intended to be used within a luminaire enclosure.

If the product is used outside a luminaire, the installation must provide suitable protection for people and environment (e.g. in illuminated ceilings).

### **7.3 Maximum number of switching cycles**

All LED driver are tested with 50,000 switching cycles.  
The actually achieved number of switching cycles is significantly higher.

### **7.4 Additional information**

Additional technical information at [www.tridonic.com](http://www.tridonic.com) → Technical Data

Lifetime declarations are informative and represent no warranty claim.  
No warranty if device was opened.
